

Project Profile

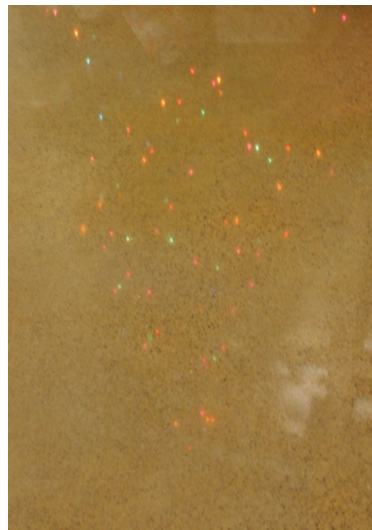

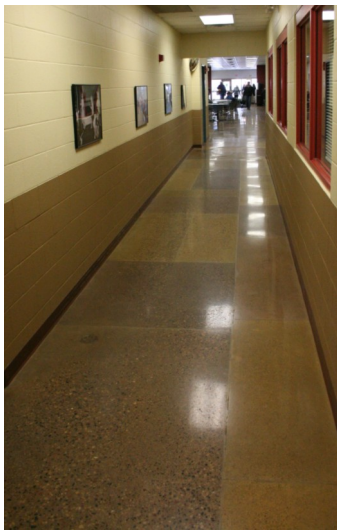

YMCA Floor Restoration

We Build Strong Flooring,
Smart Solutions, and Great Re-

The YMCA carpets were worn-out and had visible stains and water damage which hindered the overall appeal of the building. A custom polished floor deemed the best solution for the YMCA due to its durability and ability to save on maintenance costs.

During the preparation of the floor, we found many challenges once the carpet was removed. There were uneven heights in the flooring due to separate foundation floors and random cracking. To fix this base problem, cracks were routed out and filled with Polymer modified grouts and structural cracks were filled with Epoxy to bond slabs back together.

To enhance the appeal of the flooring, faux joints were cut in and grouted to simulate an ashlar slate pattern in the flooring and individual ashlar squares were custom stained to add dimension. The YMCA now has a durable floor that looks great and it's easier to maintain.

Project:
Custom Polishing

Location:
YMCA
2211 Vine Street
Hudson, WI 54016

Problem:
Old, worn-out
carpet with
stains and water
damage

Solution:
Remove carpet-
ing and adhe-
sives. Grind,
stain, and pol-
ish floors.

Results:
Beautiful, easy
to maintain
flooring with
no sealers or
waxes. Does
not need to be
covered with
mastics, carpet,
or tiles.
